

**Amendments to the Specification:**

Please replace paragraph 0128 on page 50 of the specification with the following paragraph:

**[00128]** Norketamine (10 mg/cc) drip ~~was~~ is administered i.v. over one hour, for a total dose of 40 mg norketamine. This results in reduction of the pain level by a factor of 2 (from #20 to about #10-12) as subjectively evaluated by the patient. About 1 hour after norketamine infusion is discontinued, the patient reports that the level of pain has increased to about #15, and thereafter rapidly to its previous level. The patient continues to take the other pain medications without effect.
